

Netlify One-Click Kit - README (English)

Netlify One-Click Kit (Netlify CLI One-Click Kit)

A **beginner-friendly** kit that lets you **install, use, and remove** the Netlify CLI — the tool that **publishes your website to the internet** — with **a few clicks and no commands to memorize**. A Korean-first guide panel tells you **“which number to press now.”**

Korean is the default. This English version mirrors it. Detailed guide: [GUIDE.en.md](#). Korean docs: [README.md](#), [사용설명서.md](#).

Table of Contents

1. [What is this? \(1-minute overview\)](#)
 2. [5 words to know first](#)
 3. [Prerequisites & required programs](#)
 4. [Quick start \(3 minutes\)](#)
 5. [Download & unblock](#)
 6. [How to install](#)
 7. [Run / use / how it works](#)
 8. [Full workflow](#)
 9. [How to uninstall](#)
 10. [Problem & error handling](#)
 11. [File / doc / data locations](#)
 12. [Command reference \(optional\)](#)
 13. [License · Copyright · Commercial use](#)
-

1. What is this? (1-minute overview)

- **Netlify** is a service that puts your website on the internet and gives it a **web address (URL)**.
 - Normally you must type **English commands** in a black console window — a big wall for first-timers.
 - This kit replaces that with a **Korean menu + number selection**. **Nothing to memorize.**
-

2. 5 words to know first

Word	Plain meaning
Node.js	A supporting program like a car engine . The Netlify tool needs it to run. Install once .
Black window (console/terminal)	A window where you give the computer text commands. The kit opens and closes it for you . Normal.
Netlify account	Your ID for Netlify. If you don't have one, sign up free (no card).
Deploy	Publishing your website to the internet. Two kinds: Preview (only you) and Production (everyone).
CLI	"Command-line tool." Since we only press menu items, no commands to memorize .

3. Prerequisites & required programs

What you must prepare yourself

- **Windows 10 or 11** (this kit is Windows-only)
- **Internet connection** (needed for install, login, deploy)
- **Node.js v20.12.2 or newer** (LTS) — the kit does **NOT** install Node.js for you. Install it yourself (see section 6).
- **A Netlify account** (free) — needed at the login step. Sign up at <https://app.netlify.com> if you don't have one.

What the kit installs for you

- **netlify-cli** — the Netlify tool itself. `INSTALL.bat` (menu [1] Install) installs it automatically.

In short: **You prepare** = Windows + Internet + Node.js + Netlify account. **The kit handles** = installing netlify-cli.

4. Quick start (3 minutes)

1. **Double-click** 시작하기.bat (means "Start Here").
2. Follow the single >> **What to do now** line near the bottom of the screen.
3. **[1] Install** → (when done) **[2] Use** → **[1] Log in** → **[4] Practice deploy with the sample site**.
4. When a temporary URL appears, open it. If you see "**Congratulations!**", it worked.

How to choose: Up/Down arrows + Enter, or number keys. **Just Enter** runs the green **recommended** item. **ESC** = cancel/back. The "**Now selected: ...**" line below the menu lets you confirm what you're choosing before pressing.

5. Download & unblock

Windows sometimes **locks** files downloaded from the internet. Just unblock them.

1. (Easiest) **Before** unzipping, right-click the zip → **Properties** → **check 'Unblock' at the bottom** → **OK** → then unzip.
2. If a blue "**Windows protected your PC**" dialog appears → **More info** → **Run anyway**.

Once 시작하기.bat runs once, the rest of the files are **unblocked automatically**. (Usually you only deal with this once.)

6. How to install

1. 시작하기.bat → **[1] Install**.
2. **No admin prompt appears**. (Netlify installs only into your user folder %APPDATA%\npm, so no admin rights are needed.)
3. A black window runs 6 steps in English. **Do not close it; wait (3–10 min)**. Text may appear **frozen for a while — that's normal** (downloading). Closing it breaks the install.
4. ALL DONE! NETLIFY CLI IS INSTALLED. means success.

If it says Node.js is missing → install **LTS (20+)** from <https://nodejs.org>, then close the window, re-run 시작하기.bat → [1].

Step-by-step screens and the error table are in [GUIDE.en.md](#).

7. Run / use / how it works

Double-clicking `시작하기.bat` automatically checks your computer state (Node / CLI / login) and tells you **what to do now** in one line.

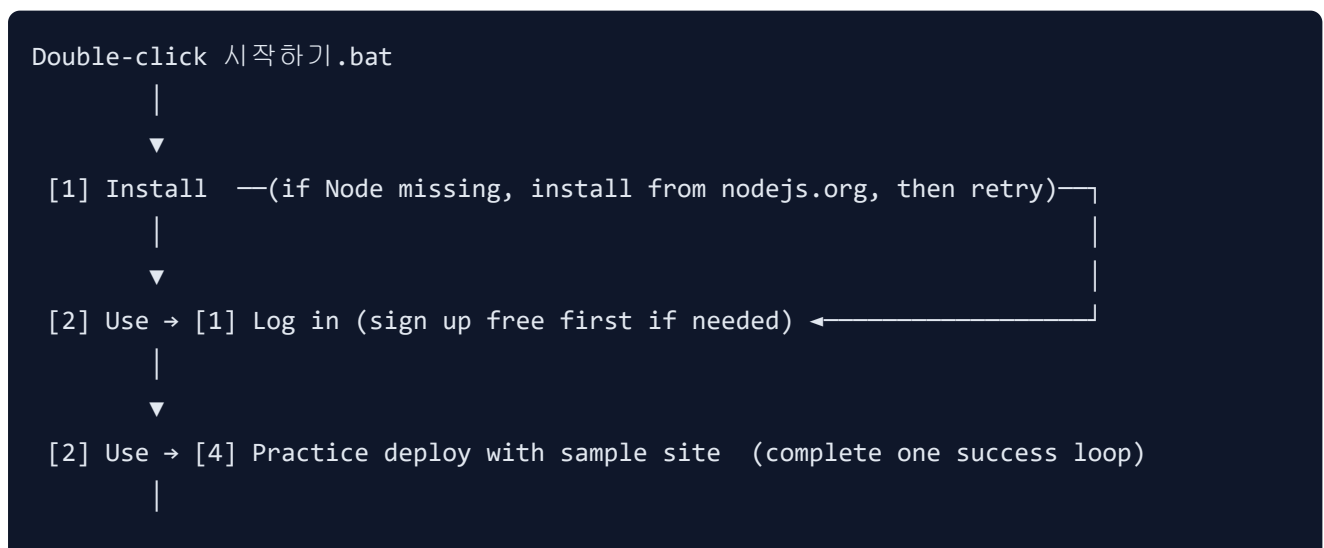

Start menu (Korean labels)

No.	Item	What it does
1	Install	Install the Netlify tool
2	Use	Log in / practice deploy / deploy my site (Korean submenu)
3	"Something's wrong?"	Self-diagnosis — checks what's wrong and shows fixes in Korean (safe)
4	Uninstall	Cleanly remove the Netlify tool (keeps your code)
5	Guide	Open the beginner guide
6	Netlify dashboard	Open the site-management page in your browser
0	Exit	Close the panel

[2] Use submenu: 1 Log in · 2 Check login · 3 List my sites · **4 Practice deploy with sample site (recommended)** · 5 Deploy my folder · 6 Full menu (English, 26 items) · 0 Back.

How it works (in brief): the Korean panel (`lib\start.ps1`) calls the English engines (`INSTALL/RUN/UNINSTALL.bat`) for you and re-reads your state every time.

8. Full workflow

```
▼
Prepare my website → [5] Deploy my folder
|
├─ [1] Preview (safe, temporary URL) ← always first
└─ [2] Production (type YES) ← only when sure
```

9. How to uninstall

1. 시작하기.bat → [4] Uninstall.
2. Use [1] Preview to see what will be removed, then type **YES** (uppercase) in [2].

What is kept: your **website code files**, **Node.js**, and the **live sites** already on Netlify's servers. (Only the Netlify tool, login key, and cache are removed.)

10. Problem & error handling

If you don't know what's wrong, use 시작하기.bat → [3] Something's wrong? (Self-diagnosis). It checks Node / install / login / internet and gives **fixes in Korean** right away.

Symptom	Fix
NETLIFY CLI IS NOT INSTALLED	Run [1] Install first
Installed but netlify ... not found	Close all windows and reopen 시작하기.bat in a new window
Node.js is NOT on this computer	Install LTS from https://nodejs.org , then [1] again
The install did not finish	Check internet/antivirus/corporate network → disable antivirus 10 min and retry (steps in the guide)
File won't open / "protected your PC" warning	See section 5 "Download & unblock"

The most common causes are a **blocked network (corporate/school)** and **antivirus**. Step-by-step recovery is in [GUIDE.en.md](#).

11. File / doc / data locations

Files inside the kit folder

File/folder	What it does
시작하기.bat	Korean start panel. Start here.
INSTALL.bat	Install the Netlify CLI (English engine)
RUN.bat	26-item full menu: login, sites, deploy (English engine)
UNINSTALL.bat	Clean removal (English engine)
lib\start.ps1	The actual content of the Korean panel
sample-site\index.html	A one-page practice sample site
README.md / README.en.md	Overview (Korean / English)
사용설명서.md / GUIDE.en.md	Detailed guide (Korean / English)
LICENSE / NOTICE	License & notices

Where your data is stored (Windows)

- **Login key & settings:** %APPDATA%\netlify\Config\config.json
- **Where the Netlify tool installs:** %APPDATA%\npm (user folder — that's why no admin is needed)

12. Command reference (optional)

You don't need commands. For the curious, here is what the English full menu (`RUN.bat` , [2] Use → [6]) actually runs:

Full-menu No.	Command	Meaning
4 / 5	<code>netlify login / netlify logout</code>	Log in / out
6	<code>netlify status</code>	Login / link status
8	<code>netlify sites:list</code>	List my sites
9	<code>netlify init</code>	Start this folder as a new site
10 / 11	<code>netlify link / netlify unlink</code>	Link / unlink folder ↔ site
13	<code>netlify dev</code>	Local preview server
17	<code>netlify deploy</code>	Preview deploy (safe)

Full-menu No.	Command	Meaning
18	<code>netlify deploy --prod</code>	Production deploy (needs YES)
20–22	<code>netlify env:list/set/unset</code>	View/set/remove env vars
23 / 24	<code>netlify open:site /</code> <code>open:admin</code>	Open my site / admin page

Item **26** of the full menu lets you type any command after `netlify` (advanced).

13. License · Copyright · Commercial use

Please follow this **strictly**. The full texts are [LICENSE](#) and [NOTICE](#) in this folder.

This kit (the files we authored)

- **License: Apache License 2.0** — © 2026 **SoDam AI Studio**.
- **Commercial use allowed:** copy, modify, distribute, internal and commercial use are all permitted (under Apache-2.0 terms).
- Conditions: when redistributing, **include** [LICENSE](#) / [NOTICE](#), state significant changes, keep attribution. **Trademarks are separate** (below).

External programs the kit installs/uses (not ours)

- **netlify-cli** — **MIT License** © Netlify, Inc. (<https://github.com/netlify/cli>). Commercial use allowed.
- **Node.js** — MIT-style license © OpenJS Foundation and contributors. Installed by you from nodejs.org.

Trademark · Service · Non-affiliation (important)

- “**Netlify**” is a **trademark** of **Netlify, Inc.** This kit is an **independent** tool, **not affiliated with, endorsed, or sponsored by** Netlify.
- **Code license and use of the Netlify service are separate.** Hosting, deployment, and fees are governed entirely by **Netlify’s own Terms of Service and pricing** (<https://www.netlify.com>). **Exceeding the free tier may incur charges.**
- A trademark mention does not grant a code license. To use the “Netlify” name/logo in a commercial service, review Netlify’s trademark policy separately.

Disclaimer

- This kit is provided **“AS IS”** with **no warranty of any kind**.
- **You are responsible** for the results of use (deploys, charges, data, etc.). **Always review your content before a production deploy.**
